# Child Poverty Rates

## 2007-2012

### Carroll County

Julie N. Zimmerman, Rural Sociology  
 Department of Community and Leadership Development  
 March, 2014

COOPERATIVE  
 EXTENSION  
 SERVICE

Child poverty rates are typically higher than total poverty rates. Even though Kentucky child poverty rates in 2012 were still higher than the nation, the gap is smaller than in 2007.

While the American Community Survey (ACS) contains estimates with detailed characteristics of those below poverty, county and other local level estimates from the ACS often refer to multiple years.

The **official poverty rates** are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

*The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.*

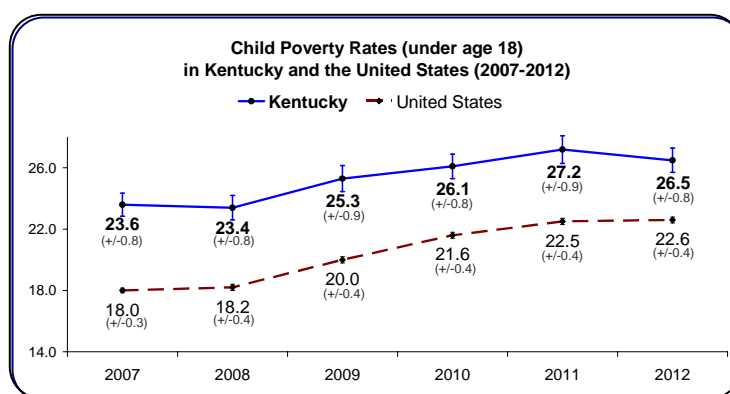

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate. This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to one decimal. If you have seen poll results in the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

**always report the margin of error.**

For help in understanding margins of error, see: "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](http://www.ca.uky.edu/snarl/KentuckyByTheNumbers/KYBTNPublications/KYBTNPublications.htm)"

# Child Poverty Rates 2007-2012

## Daviess County

Julie N. Zimmerman, Rural Sociology  
 Department of Community and Leadership Development  
 March, 2014

COOPERATIVE  
EXTENSION  
SERVICE

Child poverty rates are typically higher than total poverty rates. Even though Kentucky child poverty rates in 2012 were still higher than the nation, the gap is smaller than in 2007.

While the American Community Survey (ACS) contains estimates with detailed characteristics of those below poverty, county and other local level estimates from the ACS often refer to multiple years.

The **official poverty rates** are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

*The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.*

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate. This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to one decimal. If you have seen poll results in the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

**always report the margin of error.**

For help in understanding margins of error, see: "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](http://www.ca.uky.edu/snarl/KentuckyByTheNumbers/KYBTNPublications/KYBTNPublications.htm)"

# Child Poverty Rates

## 2007-2012

### Fulton County

Julie N. Zimmerman, Rural Sociology  
 Department of Community and Leadership Development  
 March, 2014

COOPERATIVE  
 EXTENSION  
 SERVICE

Child poverty rates are typically higher than total poverty rates. Even though Kentucky child poverty rates in 2012 were still higher than the nation, the gap is smaller than in 2007.

While the American Community Survey (ACS) contains estimates with detailed characteristics of those below poverty, county and other local level estimates from the ACS often refer to multiple years.

The **official poverty rates** are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

*The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.*

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate. This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to one decimal. If you have seen poll results in the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

**always report the margin of error.**

For help in understanding margins of error, see: "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](http://www.ca.uky.edu/snarl/KentuckyByTheNumbers/KYBTNPublications/KYBTNPublications.htm)"
