

Median Household Income

2007-2012

Mason County

Julie N. Zimmerman, Rural Sociology
Department of Community and Leadership Development
March, 2014

Median household income refers to the point at which half of all household incomes are higher and half are lower – like the median is in the middle of a road.

While the American Community Survey (ACS) contains estimates of median household income, county and other local level estimates from the ACS often refer to multiple years.

Annual estimates of median household income are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.

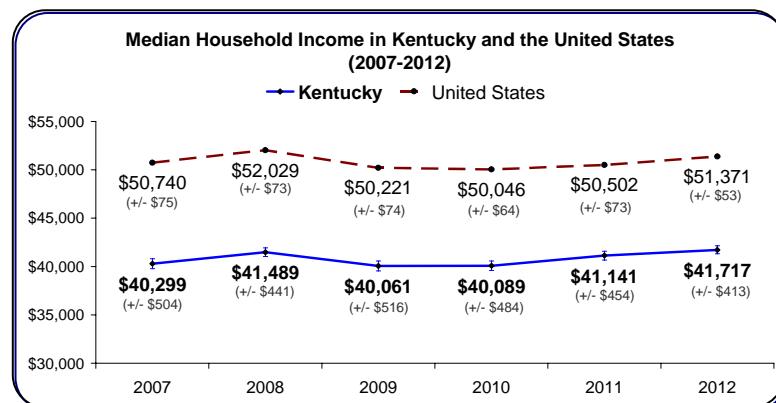

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate. This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to the nearest dollar. If you have seen poll results on the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

always report the margin of error.

For help in understanding margins of error, see : "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](#)"
<http://www.ca.uky.edu/snarl/KentuckyByTheNumbers/KYBTNPublications/KYBTNPublications.htm>

Median Household Income

2007-2012

Nicholas County

Julie N. Zimmerman, Rural Sociology
Department of Community and Leadership Development
March, 2014

Median household income refers to the point at which half of all household incomes are higher and half are lower – like the median is in the middle of a road.

While the American Community Survey (ACS) contains estimates of median household income, county and other local level estimates from the ACS often refer to multiple years.

Annual estimates of median household income are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.

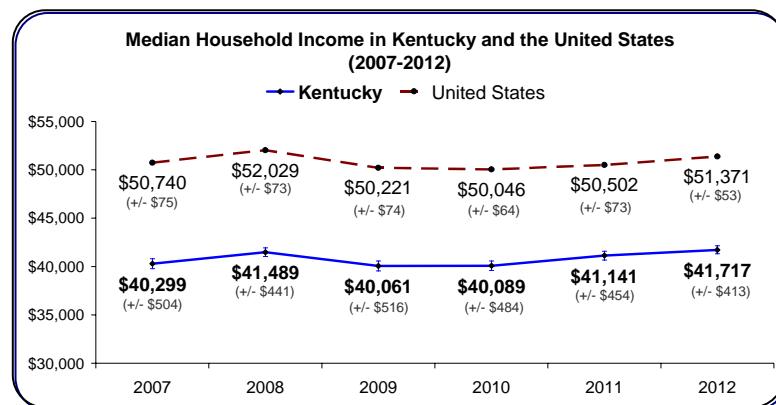

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate. This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to the nearest dollar. If you have seen poll results on the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

always report the margin of error.

For help in understanding margins of error, see : "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](#)"

SERVICE

Median household income refers to the point at which half of all household incomes are higher and half are lower – like the median is in the middle of a road.

While the American Community Survey (ACS) contains estimates of median household income, county and other local level estimates from the ACS often refer to multiple years.

Annual estimates of median household income are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate.

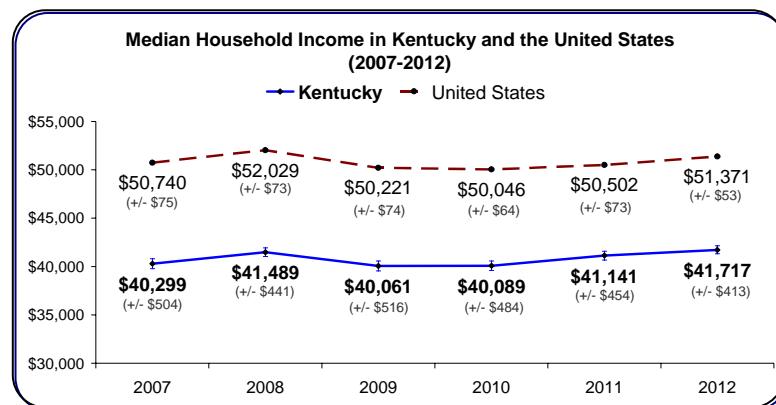

This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to the nearest dollar. If you have seen poll results on the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

always report the margin of error.

For help in understanding margins of error, see : **"And Now for the Grain of Salt: Margins of Error and the American Community Survey"**

<u>Median Household Income</u>	<u>County</u>	<u>State</u>		
	Estimate	MOE	Estimate	MOE
2012	\$32,339	+/- 2,110	\$41,717	+/- 413
2011	\$34,695	+/- 2,400	\$41,141	+/- 454
2010	\$33,026	+/- 2,018	\$40,089	+/- 484
2009	\$32,038	+/- 2,640	\$40,061	+/- 516
2008	\$32,901	+/- 3,133	\$41,489	+/- 441
2007	\$32,368	+/- 2,213	\$40,299	+/- 504

These data are from the Small Area Income & Poverty Estimates (SAIPE) at the Census Bureau and were downloaded from

<http://www.census.gov/hhes/www/saipe/>

Kentucky: By The Numbers is a program in the Department of Community and Leadership Development and the Kentucky Cooperative Extension Service at the University of Kentucky. For more information contact your local Cooperative Extension office or Dr. Julie N. Zimmerman, Professor, Rural Sociology, Department of Community and Leadership Development, 500 Garrigus Building, University of Kentucky, Lexington, KY 40546-0215. email: jzimm@email.uky.edu.

Educational programs of the Kentucky Cooperative Extension Service serve all people regardless of race, color, age, sex, religion, disability, or national origin.
