Total Poverty Rates

2007-2012

Mason County

Julie N. Zimmerman, Rural Sociology
 Department of Community and Leadership Development
 February, 2014

COOPERATIVE
EXTENSION
SERVICE

Since 2007, the number of people below poverty in Kentucky increased from 706,947 (+/- 14,225) to 821,067 (+/-15,075). Even though the recession has officially ended, in Kentucky and nationally, poverty and poverty rates have not declined to pre-recession levels.

While the American Community Survey (ACS) contains estimates with detailed characteristics of those below poverty, county and other local level estimates from the ACS often refer to multiple years.

The **official poverty rates** are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate.

This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to one decimal. If you have seen poll results reported in the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

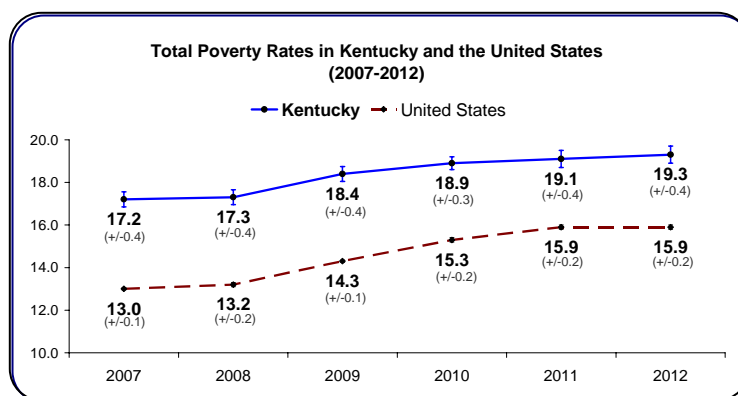

Since the margin of error tells us how reliable the estimate is, it is important to

always report the margin of error.

For help in understanding margins of error, see: "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](#)"

Total Poverty Rates

2007-2012

Nelson County

Julie N. Zimmerman, Rural Sociology
Department of Community and Leadership Development
February, 2014

Since 2007, the number of people below poverty in Kentucky increased from 706,947 (+/- 14,225) to 821,067 (+/-15,075). Even though the recession has officially ended, in Kentucky and nationally, poverty and poverty rates have not declined to pre-recession levels.

While the American Community Survey (ACS) contains estimates with detailed characteristics of those below poverty, county and other local level estimates from the ACS often refer to multiple years.

The **official poverty rates** are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.

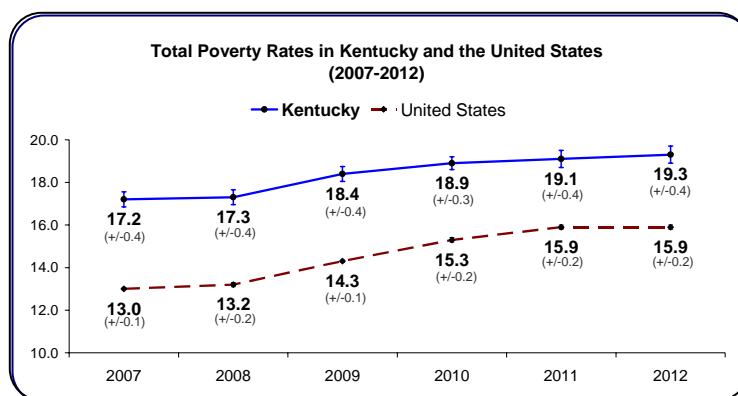

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate. This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to one decimal. If you have seen poll results reported in the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

Since the margin of error tells us how reliable the estimate is, it is important to

always report the margin of error.

For help in understanding margins of error, see: "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](http://www.ca.uky.edu/snarl/KentuckyByTheNumbers/KYBTNPublications/KYBTNPublications.htm)"

COOPERATIVE
EXTENSION
SERVICE

Since 2007, the number of people below poverty in Kentucky increased from 706,947 (+/- 14,225) to 821,067 (+/- 15,075). Even though the recession has officially ended, in Kentucky and nationally, poverty and poverty rates have not declined to pre-recession levels.

While the American Community Survey (ACS) contains estimates with detailed characteristics of those below poverty, county and other local level estimates from the ACS often refer to multiple years.

The **official poverty rates** are available through the U. S. Census Bureau's Small Area Income and Poverty Estimates (SAIPE) program.

The Kentucky: By the Numbers Data Series provides access to county data to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>.

Data from the Small Area Income and Poverty Estimates (SAIPE) program include a range for each estimate.

This tells us the range within which the estimate most likely falls. For ease of use, these confidence interval ranges have been converted to a margin of error and rounded to one decimal. If you have seen poll results reported in the news, when they say "plus or minus 5 points" (+/- 5) they are telling you the margin of error.

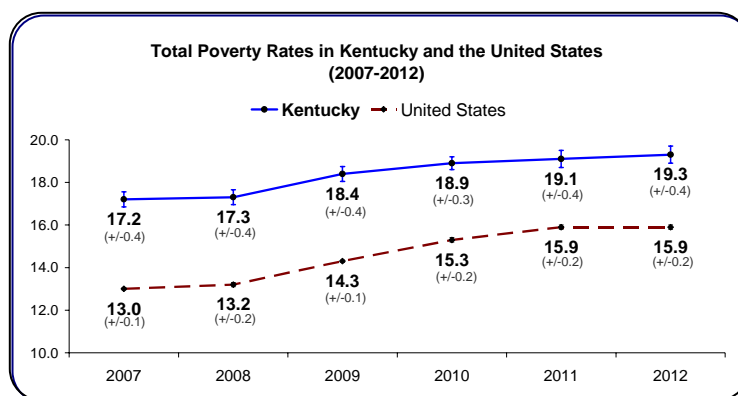

Since the margin of error tells us how reliable the estimate is, it is important to

always report the margin of error.

For help in understanding margins of error, see: "[And Now for the Grain of Salt: Margins of Error and the American Community Survey](http://www.ca.uky.edu/snarl/KentuckyByTheNumbers/KYBTNPublications/KYBTNPublications.htm)"
