This issue of the Kentucky: By The Numbers data series provides the projections for households. The number of households can increase faster than the total population. Historically, this has been the case as the number of persons per household has decreased.

To compare the household projections with the total projections for your county, see your county's issue of **Population Projections to 2050** of the Kentucky By The Numbers data series.

*The Kentucky: By the Numbers Data Series provides county data designed to support local decision making. The entire series is available at <http://www.ca.uky.edu/snarl>*
